

The 10 Steps to Help Save Your Dog's Life

At SASH, the Small Animal Specialist Hospital, our priority is to help pets and their families live their best life. Use this checklist to help identify possible cancer warning signs.

10

Lower energy levels

1

Lumps and bumps underneath your pet's skin

2

Abnormal odours from the mouth, ears or any other part of the body

9

Evidence of pain

Did you know?

Dogs over the age of 10 have a

50%

chance of getting cancer.

3

Non-healing wounds or sores

8

Changes in bathroom habits

4

Loss of appetite or weight loss

7

Difficulty swallowing

6

Increased drinking or urinating

5

Coughing or difficulty breathing

If your dog is showing any of these symptoms, please contact your local vet or SASH immediately.
